TeleDynamicX SaaS applications are economically priced within activity bands that align to customer business levels. There are no upfront license fees and we provide and manage the IT infrastructure which means lower IT costs for hardware, software, and the people needed to manage it all.

TeleDynamicX can scale indefinitely to meet customer demand and as we also manage availability, there is no need for customers to add hardware, software, or bandwidth as their business grows.

[sales@teledynamicx.com](mailto:sales@teledynamicx.com)

TeleDynamicX solutions provide standardization and optimization of all back office processes, improving completeness, accuracy and time to perform all operational and management tasks, generating cost savings greater than the cost of implementing our solutions.

Additionally, our TDX 2012 release provides connectivity to ANY TDM and VoIP switch, Gateway, Device and/or SBC connected via ANY signaling protocol, SIP / SS7 / etc., and has extensive In-Call routing features, creating opportunities for new business paradigms and layering further cost savings and benefits including:

- Customizable network-wide centralized dynamic routing.
- Management of the entire network's routing policy from a single location.
- No requirement to translate and update rate and or routing tables on multiple switches or devices.
- Incorporation of legacy and or lower cost switching platforms.
- No limitation with respect to network switch vendor choice.
- Faster time to market with new and or improved routing products.
- Overcomes routing limitations within existing switches.
- Centralized access to third party databases for CLI Substitution, LNP Translations, Telemarketing Screening, etc.
